

A partnership brief. A regulated first vertical for an agentic platform.

Prepared by CS Analytical Laboratory

Brian Mulhall, Chief Executive Officer

May 2026

One sentence.

We'd like to be your first regulated vertical.

CS Analytical is small enough to move fast, regulated enough to prove the case, and operates inside one of the most data-rich, narrowly-scoped, high-stakes niches in pharma. That combination is rare.

CS Analytical at a glance

Forty-eight people, one specialty, thirty years.

Specialty

Container Closure Integrity Testing. 48 FTE. PhD-staffed. Founder-led. USP <1207>-built. cGMP from the floor up.

Footprint

New Jersey-based, U.S. and international clients.

Track record

CEO Brian Mulhall built the first FDA-regulated cGMP CCIT lab in the world. Methods filed against USP <1207>.

Position

Vendor-neutral on platforms. Method-led, not box-led. Founder-accountable on every study.

Why CCIT is the right first vertical

Bounded ontology. Structured data. Real money attached.

Bounded ontology

Vials, syringes, autoinjectors, cartridges, cryo-bags. A finite world an agent can model.

Structured public data

FDA filings, ClinicalTrials.gov, USP / EP / PIC/S guidance — all machine-readable.

Regulatory cycle

Clear gating moments: USP updates, 483s, warning letters, PDUFA dates.

Sparse specialist field

Fewer than two dozen credible CCIT specialists worldwide. Signal-to-noise is unusual.

The five feeds that matter

Every one of them is public, structured, and continuously moving.

01	02	03	04	05
FDA	ClinicalTrials.gov	USP · EP · JP · PIC/S	Conference rosters	Container-vendor releases
Novel approvals. Supplements. Form 483 observations. Warning letters. Inspection outcomes.	Sterile-injectable indications. Phase II/III readouts. Sponsor identities and timelines.	Monograph and guidance updates. Resolves directly against client filed methods.	PDA, INTERPHEX, AAPS, BIO. Who is presenting tells you who is about to file.	West, Schott, Stevanato, BD. New formats trigger new methods.

Five agents we'd want built

Concrete specs. Buildable in
ninety days. Measurable from day one.

Market radar

Ingests five feeds, resolves to sponsor entities, emits a weekly BD shortlist with evidence linked.

Regulatory intel

Detects USP / EP / PIC/S change. Resolves against client filed methods. Flags exposure.

BD operations

Drafts outbound. Qualifies replies. Schedules. Prepares meeting briefs. Returns founder calendar.

Scientific surveillance

Distills CCIT, HVLD, helium-leak, vacuum-decay literature daily. Methods updates surface first.

Proposal synthesis

Inquiry to quoted proposal in hours. Pulls method, capacity, precedent, regulatory context.

A 90-day, boxed pilot

Three workstreams. One joint readout.

DAYS 1 — 30

Stand up the agents

TSI Citadel agents wired to the five feeds. First weekly BD digest live by day 15. First regulatory-intel flag delivered by day 20.

DAYS 31 — 60

Pilot two growth vectors

Cryo-container methods and autoinjector HVLD. Two named pilot sponsors each. Methods drafted, quotes out, first revenue booked.

DAYS 61 — 90

Package and price

Productized CCIT-as-a-service tier defined. Two public case studies drafted with client co-sign. Joint readout.

Two readings of the number

Conservative pays for itself. Aggressive changes the category.

CONSERVATIVE

Operational gains

2× qualified BD opportunities per quarter.
60% reduction in inquiry-to-quote cycle.
30% founder calendar recovered.
15-25 pp win-rate improvement.
2-3× revenue uplift over 36 months.

AGGRESSIVE

Category shift

Productized CCIT-as-a-service:
continuous, monitored, regulatory-aware.
Recurring revenue. Software-augmented
science pricing. A new line of business,
not a faster version of the old one.

Why this partnership is asymmetric in your favor

A real regulated vertical is worth more than a synthetic one.

Proof-of-platform

A live, named, FDA-regulated customer running agents against real regulatory data — not a sandbox demo.

Co-marketable case study

Public case studies with named regulatory traction. The kind of proof that closes the next ten enterprise conversations for you.

Scientific feedback loop

PhD-level domain experts pressure-testing agent reasoning against the regulatory reality. The agents get smarter.

Repeatable template

Specialty laboratories are a fragmented, under-served market. CS Analytical is the template; the next ten are the market.

Stable counterparty

Founder-led, profitable, regulated. Low deployment risk. No platform team has to babysit the integration.

Things that could go wrong, and what we'd do

Named, not glossed.

Platform lock-in

Data feeds are commodity sources. Agent prompts and reasoning chains version-controlled and exportable. Switching cost contained.

Hallucination in regulatory context

Human-in-the-loop on every flag that touches a client filed method. Regulatory intel is suggested, not authoritative — by design.

Pilot cycle-time slippage

Boxed 90-day scope, weekly checkpoints, success criteria defined up front. The pilot ends on day 90 with a readout, on time.

Misaligned incentives

Commercial structure agreed before agents are built: pilot fee, revenue share on productized tier, joint case-study rights.

THE NEXT CONVERSATION

A scoping call.
A look at the agent specs.
A boxed ninety-day pilot.
